

GURUPRIYA VISION RESEARCH FOUNDATION

ACTIVITY REPORT : APRIL 2019 - MARCH 2020

GURUPRIYA VISION RESEARCH FOUNDATION

Activity Report: April 2019 - March 2020

Introduction: Preventing Needless Blindness

Blindness is an unfortunate and tragic occurrence, especially if the blindness could be easily averted. There are three main causes of such needless blindness that continue to plague India today. Poverty and lack of awareness are contributing to this dismal state. The causes are:

- Retinopathy of Prematurity (ROP)
- Refractive errors in children
- Diabetic Retinopathy

Retinopathy of Prematurity (ROP)

There are certain unique problems facing a child, which is born preterm (prematurely) before the completion of the full-term of ten months. One such problem is ROP, which, if untreated or treated late, results in blindness in 50% of the cases. ROP is the most common cause of childhood blindness in the west. In India too, its prevalence is on the rise. The incidence of ROP reported in various Indian studies varies from 38% to 52%. Currently, we are facing what is called the third epidemic of ROP in the world, with developing countries such as India contributing to a major part of the disease burden. Management of ROP is a team work between committed eye specialists, sensitized paediatricians, diligent paramedical staff, efficient social workers and compliant parents. The need of the hour is the identification of the infants who are at risk and are in need of prompt treatment.

Refractive errors in children

Currently, 5% of school going children in India needs to wear glasses. Thanks to the changing life style, this percentage is on the rise. This has been our experience as well, on analysis of the data collected at the school eye screening camps conducted by us. In fact the incidence was found to be 30% in our camps! If the refractive error remains uncorrected, it affects the child vision and overall physical and mental development. Such children are also wrongly dubbed as being “dull” or “unintelligent” at school. Hence, it is of paramount importance that such children are identified and treated early. The best way to achieve this is to conduct school screening camps at the school premises itself.

Diabetic Retinopathy

Diabetes is on the rise in the country and very soon India may become the diabetic capital of the world. A diabetic patient is 25 times more likely to become blind than a non-diabetic person. Only a very small percentage of the diabetic patients are referred for an eye examination to rule out diabetic retinopathy (a sight threatening affliction caused by diabetes of the retina). Diabetic retinopathy occurs in 18% of the diabetic population, with treatable retinopathy occurring in 7% (rural) to 13% (urban) of the diabetic population. Not all ophthalmologists in India are trained to detect and treat Diabetic Retinopathy. WHO's *VISION-2020: Right to Sight Programme* has clearly identified Diabetic Retinopathy as a priority area in India.

Gurupriya Vision Research Foundation

Radhatri Nethralaya, a Chennai-based tertiary eye hospital, launched its charitable trust Gurupriya Vision Research Foundation (GVRF), on the occasion of its first anniversary on September 13, 2009. The trust was started with the ardent hope of eliminating the above mentioned three principal causes of needless blindness. The trust has made provisions for free screening and treatment of infants with ROP belonging to the lower strata of the society, conducts extensive school screening camps including corporation schools and spearheads awareness about diabetic retinopathy through speciality diabetic eye disease camps and awareness talks. In addition, general eye camps wherein patients with cataracts are brought in from villages and slums, operated, kept overnight and dropped back the next day are also carried out under the aegis of the trust. The trust also proposes to ensure lifelong free eye treatment for children belonging to orphanages as well as mentally challenged children.

One of the long term goals of the trust is to further combat the menace of ROP by screening the infants in hitherto unscreened rural areas in Tamil Nadu. This has been made possible with the recent procurement of the Neo Retcam, a wide-field digital portable imaging camera and using Tele-Ophthalmology to identify babies with ROP in the remote villages of Tamil Nadu. Prof. Viswanatha Raghavan, Emeritus professor from IIT, a resident of Nungambakkam, had donated the camera in July 2017 to Gurupriya Vision Research Foundation.

A van to transport the camera was also recently procured by the trust in March 2018, thanks to donations from well wishers, which included Prof. Viswanatha Raghavan, JCI Chennai Royals, Shri .Sridhar, Smt. Chitra Krishnamoorthy and Shri. Rengesh and their Families, Tamilnadu Foundation (USA) and Smt. Leela Devi Munoth Foundation. This teleophthalmology project to screen for ROP in remote places has been christened “Vision on Wheels: Balanethra Phase two”.

Eye Camps

Four kinds of eye camps conducted under the aegis of the trust aim to achieve the above mentioned goals.

1.) Project Kannoli: Free cataract screening and surgery camps for the needy

- The hospital staff members along with the medical equipment go to villages, slums and public places such as parks and check patients for eye problems. As required, glasses are prescribed and assistance given in procuring the glasses. Those patients requiring cataract surgery are brought to the Radhatri Nethralaya in the hospital van. Digital biometry is carried out to calculate the required power of the Intra Ocular Lens (IOL). The patients then undergo state-of-the art, sutureless Phaco-emulsification surgery with IOL implantation. They are given dinner and overnight accommodation in the hospital premises. After breakfast next morning, they undergo postoperative check up by the surgeon. They are then dropped back in the hospital vehicle to their villages or other screening places. All these are done totally free of cost. Table gives the data of camps held in 2019-2020. A total of 5163 patients were examined from villages around Chennai and slums in the city.

A New Milestone: Inauguration of Vision centre at Manali

Radhatri Nethralaya under the aegis of its public charitable trust **Gurupriya Vision Research Foundation** started its free eye care service at the underserved areas of Manali after inauguration of a vision centre at a clinic run by Chennai Petroleum Corporation limited (CPCL) and Rotary club of Chennai towers in the month of July 2019. The vision centre was inaugurated by Shri Aravind, Director Operations, CPCL.

**Dr.Vasumathy Vedantham and Dr.Praveen Krishna (trustees of GVRF)

Patients were picked up from manali centre in our van to Radhatri Nethralaya

Free Cataract surgery done at Radhatri Nethralaya

Post operative patients

TOTALLY 515 FREE CATARACT SURGERIES DONE FROM APRIL 2019 TO MARCH 2020

(By March 2020 more than 100 patients from the Manali centre had undergone free cataract surgery)

Free cataract surgery done for the camp patients

2.) RADAR: DIABETIC RETINOPATHY

The trust, in association with Rotary Club of Chennai Towers, started the RADAR (Radhatri Nethralaya Diabetic Retinopathy Project in association with Rotary) project in 2010. It includes the month-long free diabetic eye camps at Radhatri Nethralaya and in public places. The Rotary district Governor Rtn. Chandra Mohan inaugurated project RADAR: Season Seven on 14th Nov 2019 at Radhatri Nethralaya. He also released pamphlets to promote awareness on diabetic eye disease to be distributed to the public.

Diabetic Retinopathy camp by Radhatri Nethralaya

Radhatri Nethralaya (12, Hindi Prachara Sabha Street, T. Nagar) conducted several diabetic retin-

opathy camps to detect the blinding eye condition due to diabetes along with Rotary club of Port

City at several parks in Chennai as part of project RADAR (Radhatri Nethralaya Diabetic Retinopathy Project in Association with Rotary).

Dr. Vasumathy Vedantham (Medical Director and Retina Specialist, Radhatri Nethralaya) said that India will soon become the Diabetic capital of the world and will have maximum number of patients blind due to the condition.

Camps were held in three parks (Natesan Park, Jeeva Park and Panagal Park in T. Nagar) on three consecutive Sundays and 200 diabetic patients benefited from the screening.

Those interested in conducting such speciality eye camps in public places and offices may contact in phones 2433 2229, 2431 1550 and 94454 38681.

4.) Balanethra: Free Screening and treatment for ROP

- Free screening and treatment of preterm infants for ROP disorder at five Government hospitals has been ongoing this year too under the aegis of Gurupriya Vision Research Foundation.
 - Regional Institute of Obstetrics and Gynaecology (IOG), Egmore
 - Raja Sir Muthiah Govt Hospital (RSRM), Royapuram
 - Stanley Hospital,
 - Kilpauk Government Medical College, and
 - Government (Gosha) Hospital in Triplicane.
-
- Weekly free screening of atleast 110 pre-term infants is being carried out at the Institute of Obstetrics and Gynaecology (IOG), Govt hospital Triplicane (Gosha Hospital), Government childrens hospital RSRM, Stanley Government hospital and Kilpauk medical college. We have screened **6822** pre-term infants in the year March 2019 to April 2020

Rotary International recognized Radhatri Nethralaya as a centre to perform free vision-preserving laser surgeries on preterm infants suffering from ROP disorder. A global grant of US\$ 37500 was provided for this purpose in 2016, which is to be spread over a period of three years. In addition, several philanthropic organisations such as JCI Chennai Royals, Inner wheel and patients and well-wishers too contributed towards Balanethra project in immense measure to ensure that no baby lost sight due to ROP. We are happy to say that Global Grant was successfully completed.

Table lists the consolidated list of 378 infants that underwent free laser surgery in April 2019- march 2020

List of babies which underwent laser in 2019-2020 under BALANETHERA PROJECT

Some of our Balanethra Babies.....

Completion of Global Grant: The global grant by Rotary International (U.S.A) powered by Rotary club of Chennai Towers, Anna nagar and Damansara, Malaysia which contributed towards free vision preserving laser surgery for 320 babies under project Balanethra was successfully completed this year.

Lions club of Anna Nagar on the occasion of its golden jubilee generously supports Project Balanethra of Radhatri Nethralaya: which provides free vision preserving laser surgery to preterm babies belonging to poor socioeconomic background.

Dr Praveen Krishna, medical Director Radhatri Nethralaya receiving a donation towards the project from the hands of Lions International Director, Dr. Jung-Yul Choi.

Vision on Wheels

(Project Balanethra: Phase II)

Radhatri Nethralaya eye hospital entered its thirteen year in September 2020. In this journey, we have touched the lives of more than 35,000 patients and have adhered to the policy of treating all patients equally with compassion and quality, irrespective of their social and economic status.

Our niche area has been paediatric eye care and we deal with a lot of preterm babies and have performed many a difficult eye surgery on them. Under the aegis of our public charitable trust, Gurupriya Vision Research Foundation, we have been running a project called **Balanethra: Tender Vision**, which provides for free vision- preserving laser surgery for premature babies from poor socio-economic background, who have the blinding condition called ROP (Retinopathy of Prematurity). The Rotary International, USA has recognized Radhatri Nethralaya as a centre to perform free ROP surgeries through a global grant in 2017.

The ROP laser surgery stops the bleeding in the retinal blood vessels in premature babies and allows normal retinal development to be completed. Thereby needless blindness is averted. Till date we have lasered 378 babies free of cost. Several of our patients and other philanthropic organizations had helped us time and again to do this. All these babies were from urban areas and slums in and around the city.

There are indeed a lot of babies in remote villages which may not be treated and so turn blind, due to lack of awareness and access to health care.

In order to reach out to babies from rural areas, **Vision On Wheels: Phase II of Balanethra project** was envisaged wherein a mobile van with a retinal camera (RETCAM) would be sent to the villages and photographs of the retina of the pre-term babies taken, graded by the certified technician (tele-ROP screening) and sent via internet to the doctors at Radhatri Nethralaya. Those babies requiring treatment would be shifted immediately for free treatment to Radhatri Nethralaya in Chennai.

Through the donation of the camera **Neo RETCAM** by one of our patrons, this project is finally made possible. A mobile van which is sturdy enough to transport the sensitive camera and the babies, negotiating the rough village roads, was procured recently thanks to contributions from well-wishers and philanthropic organizations. The van would soon be modified to carry an infant warmer/incubator. In rural areas, due to poverty and lack of awareness, the parents hesitate to bring the baby on their own to the city for treatment. So, to ensure that the screening culminates in timely treatment of the needy babies, they have to be brought back for treatment in the same van on the same day.

RETCAM screening process in Villages.....

41 babies awaiting ROP screening in Vellore GH

Retcam screening in process

On Sep 2019 At RADNET(11th Anniversary of Radhatri Nethralaya) We are Proud to recognize Professor Viswanatha raghavan, Emeritus professor IIT as a patron of Radhatri Nethralaya for his immense contribution to our Vision on Wheels project which has prevented blindness in more than 7000 babies all over Tamilnadu .

LIST OF VISION ON WHEELS PROJECT VISIT FROM APRIL 2019 TO MARCH 2020

5.) Diwali Workshop on First Aid for Cracker Injuries

Our tenth annual interactive Diwali workshop to promote awareness about first aid measures to treat cracker injuries was held in 15th October 2019 at the hospital premises. This workshop had participation of 35 teachers and 76 students from city schools. After training, pamphlets and first-aid kits were provided for other non-participating students of every school. The workshop was organized under the aegis of Gurupriya Vision Research Foundation.

INVITATION FOR DIWALI WORKSHOP

GREETINGS FROM RADHATRI NETHRALAYA !
We have the pleasure of inviting one teacher and two
of your student representatives for

The 10th Annual Interactive Diwali Workshop
FIRSTAID FOLLOWING CRACKER INJURIES TO THE EYES
(Under the aegis of Gurupriya Vision Research Foundation: Public Charitable Trust
of Radhatri Nethralaya)

Dr.Vasumathy Vedantham received Woman Icon Award 2020 for her community service initiatives

Donations

You can donate to the Trust in the following ways:

- You can support the general eye camps, which are held in schools, villages, slums and public places like parks for free eye examination of the members of the public. You could suggest places to hold camps/help us in organising camps.
- Persons needing glasses as identified in the eye camp are charged a nominal fee of Rs 200 for spectacles made of glass and Rs 400 for spectacles made of plastic. Those who cannot afford either of these are provided glasses free of charge. You can support the subsidised cost of the glasses.
- Students needing glasses are identified in school eye camps. You can support the holding of school eye camps as well as the cost of the glasses in needy cases.

Persons having cataract are identified in the eye camps. You can support the subsidized cost of a cataract surgery @ Rs 5000 per eye in needy cases. Diabetic patients who need to be treated for Diabetic Retinopathy are given a laser treatment. You can support the holding of camps for free check up of diabetic patients as well as the laser treatment.

- You can save the tender vision of tiny infants, who are in immediate need of ROP laser surgery. You can support the subsidised cost of ROP surgeries @ Rs. 5000 per eye.
- Recently, the trust has procured the Neo-Retcam camera for retinal imaging and a special van to be sent to rural areas for on-the-spot screening of preterm infants and elderly persons having cataract. The retinal images of infants are sent by the technician via internet to the surgeon's desk at the hospital. The infants identified to be lasered immediately are transported to the hospital in the same van. This project named Vision on Wheels involves considerable running expenses in the form of driver's salary, technician's salary, petrol/diesel, etc. You can support this project and other forthcoming projects by making a lump sum contribution to our Corpus Fund.

Radhatri Nethralaya wishes to thank Inner wheel of Central Aaditya for coming forward to sponsor free vision preserving laser surgery for 7 more babies under project Balanethra. Treatment for a total of 32 babies were supported by the club.

We thank our patron Shri Gautam Kataria for his initiative in garnering support for project Balanethra aimed at free vision preserving laser surgery to preterm babies belonging to poor socioeconomic background.

THANKING OUR BENEFACTORS

Radhatri Nethralaya wishes to thank its patron Shri Gautam Kataria for his initiative in garnering support for Project Balanethra aimed at free vision preserving laser surgery to preterm babies belonging to poor socioeconomic background. Shri Gautam Kataria, a compassionate and thoughtful gentleman, has been our great patron and has been instrumental in bringing in more donors into the RN family and reaching out to support the Project.
