

GURUPRIYA VISION RESEARCH FOUNDATION

ACTIVITY REPORT : APRIL 2021 - MARCH 2022

GURUPRIYA VISION RESEARCH FOUNDATION

Activity Report: April 2021 - March 2022

Blindness is an unfortunate and tragic occurrence, especially if the blindness could be easily averted. There are three main causes of such needless blindness that continue to plague India today. Poverty and lack of awareness are contributing to this dismal state. The causes are:

- Retinopathy of Prematurity (ROP)
- Refractive errors in children
- Diabetic Retinopathy

Retinopathy of Prematurity (ROP)

There are certain unique problems facing a child, which is born preterm (prematurely) before the completion of the full-term of ten months. One such problem is ROP, which, if untreated or treated late, results in blindness in 50% of the cases. ROP is the most common cause of childhood blindness in the west. In India too, its prevalence is on the rise. The incidence of ROP reported in various Indian studies varies from 38% to 52%. Currently, we are facing what is called the third epidemic of ROP in the world, with developing countries such as India contributing to a major part of the disease burden. Management of ROP is a team work between committed eye specialists, sensitized pediatricians, diligent paramedical staff, efficient social workers and compliant parents. The need of the hour is the identification of the infants who are at risk and are in need of prompt treatment.

Refractive errors in children

Currently, 5% of school going children in India needs to wear glasses. Thanks to the changing life style, this percentage is on the rise. This has been our experience as well, on analysis of the data collected at the school eye screening camps conducted by us. In fact the incidence was found to be 30% in our camps! If the refractive error remains uncorrected, it affects the child vision and overall physical and mental development. Such children are also wrongly dubbed as being “dull” or “unintelligent” at school. Hence, it is of paramount importance that such children are identified and treated early. The best way to achieve this is to conduct school screening camps at the school premises itself.

Diabetic Retinopathy

Diabetes is on the rise in the country and very soon India may become the diabetic capital of the world. A diabetic patient is 25 times more likely to become blind than a non-diabetic person. Only a very small percentage of the diabetic patients are referred for an eye examination to rule out diabetic retinopathy (a sight threatening affliction caused by diabetes of the retina). Diabetic retinopathy occurs in 18% of the diabetic population, with treatable retinopathy occurring in 7% (rural) to 13% (urban) of the diabetic population. Not all ophthalmologists in India are trained to detect and treat Diabetic Retinopathy. WHO'sVISION-2020: Right to Sight Programme has clearly identified Diabetic Retinopathy as a priorityarea in India.

Gurupriya Vision Research Foundation

Radhatri Nethralaya, a Chennai-based tertiary eye hospital, launched its charitable trust Gurupriya Vision Research Foundation (GVRF), on the occasion of its first anniversary on September 13, 2009. The trust was started with the ardent hope of eliminating the above mentioned three principal causes of needless blindness. The trust has made provisions for free screening and treatment of infants with ROP belonging to the lower strata of the society, conducts extensive school screening camps including corporation schools and spearheads awareness about diabetic retinopathy through specialty diabetic eye disease camps and awareness talks. In addition, general eye camps wherein patients with cataracts are brought in from villages and slums, operated, kept overnight and dropped back the next day are also carried out under the aegis of the trust. The trust also proposes to ensure lifelong free eye treatment for children belonging to orphanages as well as mentally challenged children.

One of the long term goals of the trust is to further combat the menace of ROP by screening the infants in hitherto unscreened rural areas in Tamil Nadu. This has been made possible with the recent procurement of the Neo Retcam, a wide-field digital portable imaging camera and using Tele-Ophthalmology to identify babies with ROP in the remote villages of Tamil Nadu. Prof. Viswanatha Raghavan, Emeritus professor from IIT, a resident of Nungambakkam, had donated the camera in July 2017 to Gurupriya Vision Research Foundation.

A van to transport the camera was also recently procured by the trust in March 2018, thanks to donations from well-wishers, which included Prof. Viswanatha Raghavan, JCI Chennai Royals, Shri. Srihari, Smt. Chitra Krishnamoorthy and Shri. Rengesh and their Families, Tamilnadu Foundation (USA) and Smt. Leela Devi Munoth Foundation. This teleophthalmology project to screen for ROP in remote places has been christened “Vision on Wheels: Balanethra Phase two”

Eye Camps

Four kinds of eye camps conducted under the aegis of the trust aim to achieve the above mentioned goals.

1.) Project Kannoli: Free cataract screening and surgery camps for the needy

We continue to do all eye camps with all COVID Safety protocols in place despite the pandemic and the lockdown as much as possible. Our camp team consisting specialized optometrist wore mask, gloves and PPE's and ensure adequate social distancing of all patients.

- The hospital staff members along with the medical equipment go to villages, slums and public places such as parks and check patients for eye problems. As required, glasses are prescribed and assistance given in procuring the glasses. Those patients requiring cataract surgery are brought to the Radhatri Nethralaya in the hospital van. Digital biometry is carried out to calculate the required power of the Intra Ocular Lens (IOL). The patients then undergo state-of-the art, suture-less Phacoemulsification surgery with IOL implantation. They are given dinner and overnight accommodation in the hospital premises. After breakfast next morning, they undergo postoperative check up by the surgeon. They are then dropped back in the hospital vehicle to their villages or other screening places. All these are done totally free of cost. Table gives the data of camps held in April 2021-March 2022. A total of 2652 patients were examined from villages around Chennai and slums in the city.

2) SPECIALISED EYE CAMPS

A.) RADAR: RADHATRI NETHRALAYA DIABETIC RETINOPATHY PROJECT IN ASSOCIATION WITH ROTARY

Radhatri Nethralaya launched the eighth consecutive annual Project RADAR at its premises on 9/11/2021. The launch was by the Rotary District Governor DG.Rtn.Sridhar. He also released pamphlets on diabetic retinopathy to be distributed in busy junctions to improve awareness amongst the public. Rtn.Dr.M.S.RaviVarma, Rotary district health chair was the guest of honor. The project was graced by Rtn.Ramakrishnan Mani, president Rotary club of Chennai towers and other distinguished Rotarians. The distribution of pamphlets and the project would be under the aegis of Gurupriya Vision Research Foundation, the Public Charitable Trust of Radhatri Nethralaya

Speaking on the occasion, Dr.Praveen Krishna, Medical Director Radhatri Nethralaya said that Project RADAR was Radhatri Nethralaya Diabetic Retinopathy Project in Association with Rotary and it was a month long free screening of deserving diabetic patients for diabetic eye disease at Radhatri Nethralaya.

Dr.Vasumathy Vedantham, Medical Director of Radhatri Nethralaya gave a talk on the treatment of diabetic Retinopathy and said that India was fast becoming the diabetic capital of the world and camps such as project RADAR were the need of the hour.

A press release was given by GVRF trustees to improve public awareness that, diabetic patients interested in getting themselves checked under Project RADAR could call 9445438681 and register themselves for a free Retina checkup to rule out Diabetic Retinopathy till November 9th 2021.

INVITE FOR RADAR PROJECT

A Public awareness initiative by GURUPRIYA VISION RESEARCH FOUNDATION!

Patient information pamphlets on diabetic eye disease and its complications were released by the rotary district governor and the pamphlets were distributed by the trustees in all busy junctions like bus stops and crowded places to the general public.

B) GlauCom-R Camps

Glaucoma awareness and detection in the community by Radhatri Nethralaya, A series of specialty eye camps to detect glaucoma, a blinding eye condition associated with increased eye pressure in the eyes, were initiated and carried out between April 2021 and March 2022. The detection of Eye pressure was done in all these camps by 'NON CONTACT METHOD' without touching the patient's eyes. These camps were carried out in parks and other places and the patients identified to have glaucoma, were brought back to base Hospital(RN) for further free evaluation.

C) Save Sight Give Light 2021

Further to the eye camp on 16/9/21 at Chennaiipuri Annadanam Samajam orphanage, 15 children identified to have advanced eye issues were brought to Radhatri Nethralaya for specialized testing and plan for treatment; under the aegis of Inner wheel of Madras Central

This Inner Wheel Club held health screening camp at Home for disadvantaged kids in R. A. Puram

Chennapuri Annadana Samajam is an orphanage home and has been engaged for more than a century in feeding, clothing, and housing poor, orphaned children. At R. A. Puram, this trust runs the P. V. Rao School which provides education and food to several children.

They also have a hostel which houses about 200 children who are supported by sponsorship received by the trust.

Inner Wheel Club of Madras Central conducted a health camp at this Home on Sept. 16.

At this camp, there was a dental checkup, vision test and blood grouping of 167 children in the school. The club will be helping children who require vision correction and those who need further support to take care of their dental issues by sponsoring their treatment.

For those children requiring corrective glasses, this need will be fulfilled by Inner Wheel Club of Madras Central. Similarly, dental issues faced by the children will be taken care by the club.

The Club was supported in these efforts by Radhatri Nethralaya (for the vision camp) and Mahesh Dental Care (for the dental camp). Blood grouping was done by Gopi Labs. The children were also provided breakfast, snacks and lunch.

Anitha Balachander is president of Inner Wheel Club of Madras Central, Contact 9841460080

3.) Balanethra: Free Screening and Treatment for ROP

- Free screening and treatment of preterm infants for ROP disorder at five Government hospitals has been on-going this year too, under the aegis of Gurupriya Vision Research Foundation.
- Regional Institute of Obstetrics and Gynaecology (IOG), Egmore
- Raja Sir Muthiah Govt Hospital (RSRM), Royapuram
- Stanley Hospital
- Kilpauk Government Medical College
- Government (Gosha) Hospital in Triplicane.
- Weekly free screening of atleast 110 pre-term infants is being carried out at the Institute of Obstetrics and Gynaecology (IOG), Govt hospital Triplicane (Gosha Hospital), Government children's hospital RSRM, Stanley Government hospital and Kilpauk medical college. We have screened **10451** Pre-term infants in the period between April 2021 to March 2022

Rotary International recognized Radhatri Nethralaya as a Centre to perform free vision-preserving laser surgeries on preterm infants suffering from ROP disorder. A global grant of US\$ 37500 was provided for this purpose in 2016, which was to be spread over a period of three years. We are happy to say that global grant was successfully completed in 2019.

In addition, several philanthropic organizations such as JCI Chennai Royals, Inner wheel and patients and well-wishers too contributed towards Balanethra project in immense measure to ensure that no baby lost sight due to ROP!

Table lists the consolidated list of 388 infants that underwent free laser surgery in the period between April 2021 to March 2022.

List of Babies which underwent laser in April 2021 – March 2022
(Balanethra Project)

Some of our Balanethra Babies

Unique Eye surgeries 2021

Suture-less trans nasal lens sparing Vitrectomy surgery for a baby 185 kms from Chennai with retinal detachment due to the blinding condition called ROP @ Radhatri Nethralaya
One of the few centers in India equipped to do this surgery Nov 2021

This angel weighting less than a kilo, from a village in Perambalur district underwent a marathon four hour laser plus intravitreal injections for half zone Hybrid ROP with bleb like detachments (the worst cocktail of findings) last week at Radhatri Nethralaya
Glad to note that the baby is doing well now by God's grace

Rachel has found a home

This is the abandoned female orphan baby girl from Meghalaya with Stage V ROP who underwent bilateral vitrectomy without any charge at Radhatri Nethralaya during COVID first wave

**So happy to share that she has been adopted by US parents who decided to adopt her after hearing her travails and the free eye surgery which was done
So happy that Rachel has found a home**

Dear Brindha Mam,

A very happy news one of my friends acquaintance is adopting Rachael. American family mam. They're loving Rachael like anything. The story of baby's ROP surgery and all the extraordinary efforts reached the family and they got so empathetic towards Rachael, and decided to adopt her mam.

It's just because of your help and Radhatri Nethralayas intervention that baby is now till here 😊

Our special thanks to Doctor Vasumathi Mam. She is an angel in disguise 🙏

Baby has now found a family and she will taken care so well, Thank you so much again mam 😊

Very nice to see these totally awesome ROP warriors growing well, seeing well, and also learning to pose very well for the camera

Vision on Wheels

(Project Balanethra: Phase II)

Radhatri Nethralaya eye hospital entered its Fifteenth year in September 2022. In this journey, we have touched the lives of more than 40,000 patients and have adhered to the policy of treating all patients equally with compassion and quality, irrespective of their social and economic status.

Our niche area has been pediatric eye care and we deal with a lot of preterm babies and have performed many a difficult eye surgery on them. Under the aegis of our public charitable trust, Gurupriya Vision Research Foundation, we have been running a project called **Balanethra: Tender Vision**, which provides for free vision- preserving laser surgery for premature babies from poor socio-economic background, who have the blinding condition called ROP (Retinopathy of Prematurity). The Rotary International, USA, has recognized Radhatri Nethralaya as a Centre to perform free ROP surgeries through a global grant in 2021.

The ROP laser surgery stops the bleeding in the retinal blood vessels in premature babies and allows normal retinal development to be completed. Thereby needless blindness is averted. Till date we have lasered 1024 babies free of cost. Several of our patients and other philanthropic organisations had helped us time and again to do this. All these babies were from urban areas and slums in and around the city.

There are indeed a lot of babies in remote villages which may not be treated and so turn blind, due to lack of awareness and access to health care.

In order to reach out to babies from rural areas,

Vision On Wheels: Phase II of Balanethra project was envisaged wherein a mobile van with a retinal camera (RETCAM) would be sent to the villages and photographs of the retina of the pre-term babies taken, graded by the certified technician (Tele-ROP screening) and sent via internet to the doctors at Radhatri Nethralaya. Those babies requiring treatment would be shifted immediately for free treatment to Radhatri Nethralaya in Chennai.

Through the donation of the camera **Neo RETCAM** by one of our patrons, this project is finally made possible. A mobile van which is sturdy enough to transport the sensitive camera and the babies, negotiating the rough village roads, was procured recently thanks to contributions from well-wishers and philanthropic organizations. The van would soon be modified to carry an infant warmer/incubator. In rural areas, due to poverty and lack of awareness, the parents hesitate to bring the baby on their own to the city for treatment. So, to ensure that the screening culminates in timely treatment of the needy babies, they have to be brought back for treatment in the same van on the same day.

PRE COVID TIMES

A lot of pressure and heat was faced by all of us at Radhatri Nethralaya from March 2020 in the COVID pandemic to continue our service delivery, at the same time to stay protected and protect our patients by wearing PPEs (despite the sweltering heat in the summer months), masks, sanitizing and ensuring of the social distancing.

Social distancing During COVID

All mothers who had brought their babies for VOW visits, were instructed to sit with appropriate COVID safety distancing in place and were taught about hand washing and were instructed to wear masks by our team of nurses and technicians.

The Vision on Wheels team of Radhatri Nethralaya with the lasered babies from villages

Radhatri Nethralaya continued its rural teleophthalmology project Vision on Wheels to detect the blinding condition called ROP in preterm babies in rural areas, in 2021, the COVID second wave not with standing

Spreading Smiles

In May 18, 2021, Radhatri Nethralaya commenced distribution of 500 numbers of N 95 masks to the health care frontline workers, ambulance drivers, patients, and in the neighborhood

NETHRA '22

Radhatri Nethralaya organised a live musical extravaganza “Nethra’22 on March 12th 2022, to raise funds for the treatment of preterm babies born to underprivileged parents and suffering from the blinding disease called Retinopathy of Prematurity (ROP). The fund raiser also aimed to improve awareness about this condition. It was streamed live on the youtube channel of Radhatri Nethralaya and was viewed by more than 3500 people. The donations received towards the fund raiser were used towards creation of a corpus fund for Balanethra project, which offers free vision preserving laser surgery for ROP, under the aegis of Gurupriya Vision Research Foundation, the public charitable trust of Radhatri Nethralaya. Many philanthropic corporates, individuals and patients came forward to support this noble cause. Placards showcasing information on ROP were displayed throughout the programme to improve awareness amongst the public.

Celebrities like noted Carnatic Musician Smt. Nithyashree Mahadevan, Actor Shri Nizhalgal Ravi, Pianist Shri Anil Srinivasan, Tamil Laureate Shri Erode Tamilanban and Actor Mirchi Shiva lent their voices in support of Nethra’22. In her speech, Dr.Vasumathy Vedantham, Managing Trustee Gurupriya Vision Research Foundation, thanked the other trustees Prof, Viswanatha Raghavan, Shri Rajendran and Dr. Praveen Krishna for their stupendous support to the cause.
